

Package ‘ppitables’

October 25, 2020

Type Package

Title Lookup Tables to Generate Poverty Likelihoods and Rates using the Poverty Probability Index (PPI)

Version 0.5.4

Description The Poverty Probability Index (PPI) is a poverty measurement tool for organizations and businesses with a mission to serve the poor. The PPI is statistically-sound, yet simple to use: the answers to 10 questions about a household’s characteristics and asset ownership are scored to compute the likelihood that the household is living below the poverty line – or above by only a narrow margin. This package contains country-specific lookup data tables used as reference to determine the poverty likelihood of a household based on their score from the country-specific PPI questionnaire. These lookup tables have been extracted from documentation of the PPI found at <https://www.povertyindex.org> and managed by Innovations for Poverty Action <https://www.poverty-action.org>.

find_table	<i>Search for PPI table by specifying region, country and/or calculation type.</i>
------------	--

Description

Search for PPI table by specifying region, country and/or calculation type.

Usage

```
find_table(
  region = steer$region,
  country = steer$country[steer$region %in% region],
  type = steer$type[steer$country %in% country]
)
```

Arguments

region	Region of the world to search PPI table from. Default is c("Africa", "Asia", "Eastern Europe and Central Asia", "Latin America and the Carribean", "Middle East and North Africa"). Allows specification of one region or a vector of regions.
country	Country to search PPI table from. Default is vector of all country names from the specified region/s. Allows specification of one country name or a vector of country names.
type	Type of PPI calculation used. Can be one of two options: "sps" for the Simple Poverty Scorecard calculation or "ipa" for the International Poverty Alliance calculation. Default is vector of all calculation types available for the specified country/ies.

Value

A data frame in tibble format of corresponding PPI table/s matching the search parameters. The data frame contains information on the region, country, description, survey year, release year, calculation type, and filename of the returned PPI table/s.

Examples

```
## View the full data frame of all the PPI tables available through ppitables
find_table()
```

get_table *Get PPI table/s based on a specified PPI table/s search output*

Description

Get PPI table/s based on a specified PPI table/s search output

Usage

```
get_table(  
  region = steer$region,  
  country = steer$country[steer$region %in% region],  
  type = steer$type[steer$country %in% country]  
)
```

Arguments

region	Region of the world to search PPI table from. Default is <code>c("Africa", "Asia", "Eastern Europe and Central Asia", "Latin America and the Carribean", "Middle East and North Africa")</code> . Allows specification of one region or a vector of regions.
country	Country to search PPI table from. Default is vector of all country names from the specified region/s. Allows specification of one country name or a vector of country names.
type	Type of PPI calculation used. Can be one of two options: "sps" for the Simple Poverty Scorecard calculation or ipa for the International Poverty Alliance calculation. Default is vector of all calculation types available for the specified country/ies.

Value

A data frame in tibble format of corresponding PPI table/s matching the search parameters. The data frame is in tidy format and contains the corresponding poverty probability (ppi) for a specific score (score) for various poverty definitions) for the country (country) and PPI calculation type (type).

Examples

```
## Create a tidy format PPI table for Nepal  
get_table(region = "Asia", country = "Nepal")
```

ppiAFG2012

*Poverty Probability Index (PPI) lookup table for Afghanistan***Description**

Poverty Probability Index (PPI) lookup table for Afghanistan

Usage

ppiAFG2012

Format

A data frame with 7 columns and 101 rows:

score PPI score

n1 National poverty line

nu150 National poverty line (150%)

nu200 National poverty line (200%)

extreme USAID extreme poverty

ppp125 Below \$1.25 per day purchasing power parity (2005)

ppp250 Below \$2.50 per day purchasing power parity (2005)

Source

<https://www.povertyindex.org>

Examples

```
# Access Afghanistan PPI table
ppiAFG2012

# Given a specific PPI score (from 0 - 100), get the row of poverty
# probabilities from PPI table it corresponds to
ppiScore <- 50
ppiAFG2012[ppiAFG2012$score == ppiScore, ]

# Use subset() function to get the row of poverty probabilities corresponding
# to specific PPI score
ppiScore <- 50
subset(ppiAFG2012, score == ppiScore)

# Given a specific PPI score (from 0 - 100), get a poverty probability
# based on a specific poverty definition. In this example, the USAID
# extreme poverty definition
ppiScore <- 50
ppiAFG2012[ppiAFG2012$score == ppiScore, "extreme"]
```

ppiAGO2015

Poverty Probability Index (PPI) lookup table for Angola

Description

Poverty Probability Index (PPI) lookup table for Angola

Usage

ppiAGO2015

Format

A data frame with 9 columns and 101 rows:

score PPI score

n1100 National poverty line (100%)

n1150 National poverty line (150%)

n1200 National poverty line (200%)

half100 Poorest half below 100% national

ppp125 Below \$1.25 per day purchasing power parity (2005)

ppp200 Below \$2.00 per day purchasing power parity (2005)

ppp250 Below \$2.50 per day purchasing power parity (2005)

ppp500 Below \$5.00 per day purchasing power parity (2005)

Source

<https://www.povertyindex.org>

Examples

```
# Access Angola PPI table
ppiAGO2015

# Given a specific PPI score (from 0 - 100), get the row of poverty
# probabilities from PPI table it corresponds to
ppiScore <- 50
ppiAGO2015[ppiAGO2015$score == ppiScore, ]

# Use subset() function to get the row of poverty probabilities corresponding
# to specific PPI score
ppiScore <- 50
subset(ppiAGO2015, score == ppiScore)

# Given a specific PPI score (from 0 - 100), get a poverty probability
# based on a specific poverty definition. In this example, the national
```

```
# poverty line definition
ppiScore <- 50
ppiAG02015[ppiAG02015$score == ppiScore, "extreme"]
```

ppiBEN2012

Poverty Probability Index (PPI) lookup table for Benin

Description

Poverty Probability Index (PPI) lookup table for Benin

Usage

```
ppiBEN2012
```

Format

A data frame with 7 columns and 101 rows:

```
score PPI score
n1100 National poverty line (100%)
n1150 National poverty line (150%)
n1200 National poverty line (200%)
extreme USAID extreme poverty
ppp125 Below $1.25 per day purchasing power parity (2005)
ppp250 Below $2.50 per day purchasing power parity (2005)
```

Source

<https://www.povertyindex.org>

Examples

```
# Access Benin PPI table
ppiBEN2012

# Given a specific PPI score (from 0 - 100), get the row of poverty
# probabilities from PPI table it corresponds to
ppiScore <- 50
ppiBEN2012[ppiBEN2012$score == ppiScore, ]

# Use subset() function to get the row of poverty probabilities corresponding
# to specific PPI score
ppiScore <- 50
subset(ppiBEN2012, score == ppiScore)
```

```
# Given a specific PPI score (from 0 - 100), get a poverty probability
# based on a specific poverty definition. In this example, the USAID
# extreme poverty definition
ppiScore <- 50
ppiBEN2012[ppiBEN2012$score == ppiScore, "extreme"]
```

ppiBFA2011

Poverty Probability Index (PPI) lookup table for Burkina Faso

Description

Poverty Probability Index (PPI) lookup table for Burkina Faso

Usage

```
ppiBFA2011
```

Format

A data frame with 8 columns and 101 rows:

score PPI score

n1100 National poverty line (100%)

n150 National poverty line (50%)

n175 National poverty line (75%)

n1150 National poverty line (150%)

extreme USAID extreme poverty

ppp125 Below \$1.25 per day purchasing power parity (2005)

ppp250 Below \$2.50 per day purchasing power parity (2005)

Source

<https://www.povertyindex.org>

ppiBFA2014

Poverty Probability Index (PPI) lookup table for Burkina Faso

Description

Poverty Probability Index (PPI) lookup table for Burkina Faso

Usage

ppiBFA2014

Format

A data frame with 18 columns and 101 rows:

score PPI score

food Food poverty line

n1100 National poverty line (100%)

n1150 National poverty line (150%)

n1200 National poverty line (200%)

ppp125 Below \$1.00 per day purchasing power parity (2005)

ppp200 Below \$1.25 per day purchasing power parity (2005)

ppp250 Below \$2.50 per day purchasing power parity (2005)

ppp500 Below \$5.00 per day purchasing power parity (2005)

ppp844 Below \$8.44 per day purchasing power parity (2005)

ppp190 Below \$1.90 per day purchasing power parity (2011)

ppp310 Below \$3.10 per day purchasing power parity (2011)

median Median poverty line

percentile20 Below 20th percentile poverty line

percentile40 Below 40th percentile poverty line

percentile50 Below 50th percentile poverty line

percentile60 Below 60th percentile poverty line

percentile80 Below 80th percentile poverty line

Source

<https://www.povertyindex.org>

ppiBFA2017

Poverty Probability Index (PPI) lookup table for Burkina Faso

Description

Poverty Probability Index (PPI) lookup table for Burkina Faso

Usage

ppiBFA2017

Format

A data frame with 15 columns and 101 rows:

score PPI score

n1100 National poverty line (100%)

n1150 National poverty line (150%)

n1200 National poverty line (200%)

ppp125 Below \$1.25 per day purchasing power parity (2005)

ppp250 Below \$2.50 per day purchasing power parity (2005)

ppp500 Below \$5.00 per day purchasing power parity (2005)

ppp100 Below \$1.00 per day purchasing power parity (2011)

ppp190 Below \$1.90 per day purchasing power parity (2011)

ppp320 Below \$3.20 per day purchasing power parity (2011)

ppp550 Below \$5.50 per day purchasing power parity (2011)

percentile20 Below 20th percentile poverty line

percentile40 Below 40th percentile poverty line

percentile60 Below 60th percentile poverty line

percentile80 Below 80th percentile poverty line

Source

<https://www.povertyindex.org>

Examples

```
# Access Burkina Faso PPI table
ppiBFA2017

# Given a specific PPI score (from 0 - 100), get the row of poverty
# probabilities from PPI table it corresponds to
ppiScore <- 50
ppiBFA2017[ppiBFA2017$score == ppiScore, ]
```

```

# Use subset() function to get the row of poverty probabilities corresponding
# to specific PPI score
ppiScore <- 50
subset(ppiBFA2017, score == ppiScore)

# Given a specific PPI score (from 0 - 100), get a poverty probability
# based on a specific poverty definition. In this example, the national
# poverty line definition
ppiScore <- 50
ppiBFA2017[ppiBFA2017$score == ppiScore, "n1100"]

```

ppiBGD2013

Poverty Probability Index (PPI) lookup table for Bangladesh

Description

Poverty Probability Index (PPI) lookup table for Bangladesh

Usage

```
ppiBGD2013
```

Format

A data frame with 10 columns and 101 rows:

score PPI score

n1 National lower poverty line

nu100 National upper poverty line (100%)

nu150 National upper poverty line (150%)

nu200 National upper poverty line (200%)

extreme USAID extreme poverty

ppp125 Below \$1.25 per day purchasing power parity (2005)

ppp175 Below \$1.75 per day purchasing power parity (2005)

ppp200 Below \$2.00 per day purchasing power parity (2005)

ppp250 Below \$2.50 per day purchasing power parity (2005)

Source

<https://www.povertyindex.org>

Examples

```
# Access Bangladesh PPI table
ppiBGD2013

# Given a specific PPI score (from 0 - 100), get the row of poverty
# probabilities from PPI table it corresponds to
ppiScore <- 50
ppiBGD2013[ppiBGD2013$score == ppiScore, ]

# Use subset() function to get the row of poverty probabilities corresponding
# to specific PPI score
ppiScore <- 50
subset(ppiBGD2013, score == ppiScore)

# Given a specific PPI score (from 0 - 100), get a poverty probability
# based on a specific poverty definition. In this example, the USAID
# extreme poverty definition
ppiScore <- 50
ppiBGD2013[ppiBGD2013$score == ppiScore, "extreme"]
```

ppiBOL2015

*Poverty Probability Index (PPI) lookup table for Bolivia***Description**

Poverty Probability Index (PPI) lookup table for Bolivia

Usage

```
ppiBOL2015
```

Format

A data frame with 10 columns and 101 rows:

```
score PPI score
n1100 Food poverty line
n1150 National poverty line (100%)
n1200 National poverty line (150%)
half100 National poverty line (200%)
ppp125 Poorest half below 100% national
ppp200 Below $1.25 per day purchasing power parity (2005)
ppp250 Below $2.00 per day purchasing power parity (2005)
ppp500 Below $2.50 per day purchasing power parity (2005)
ppp844 Below $5.00 per day purchasing power parity (2005)
```

Source

<https://www.povertyindex.org>

Examples

```
# Access Bolivia PPI table
ppiBOL2015

# Given a specific PPI score (from 0 - 100), get the row of poverty
# probabilities from PPI table it corresponds to
ppiScore <- 50
ppiBOL2015[ppiBOL2015$score == ppiScore, ]

# Use subset() function to get the row of poverty probabilities corresponding
# to specific PPI score
ppiScore <- 50
subset(ppiBOL2015, score == ppiScore)

# Given a specific PPI score (from 0 - 100), get a poverty probability
# based on a specific poverty definition. In this example, the food
# poverty line definition
ppiScore <- 50
ppiBOL2015[ppiBOL2015$score == ppiScore, "nlFood"]
```

ppiBRA2010

Poverty Probability Index (PPI) lookup table for Brazil

Description

Poverty Probability Index (PPI) lookup table for Brazil

Usage

```
ppiBRA2010
```

Format

A data frame with 10 columns and 101 rows:

```
score PPI score
belowHalfWage Below the half minimum wage line
belowQtrWage Below the quarter minimum wage line
belowOneWage Below the one minimum wage line
belowTwoWage Below the two minimum wage line
extreme USAID extreme poverty
ppp125 Below $1.25 per day purchasing power parity (2005)
```

ppp250 Below \$2.50 per day purchasing power parity (2005)
 ppp375 Below \$3.75 per day purchasing power parity (2005)
 ppp500 Below \$5.00 per day purchasing power parity (2005)

Source

<https://www.povertyindex.org>

Examples

```
# Access Brazil PPI table
ppiBRA2010

# Given a specific PPI score (from 0 - 100), get the row of poverty
# probabilities from PPI table it corresponds to
ppiScore <- 50
ppiBRA2010[ppiBRA2010$score == ppiScore, ]

# Use subset() function to get the row of poverty probabilities corresponding
# to specific PPI score
ppiScore <- 50
subset(ppiBRA2010, score == ppiScore)

# Given a specific PPI score (from 0 - 100), get a poverty probability
# based on a specific poverty definition. In this example, the USAID
# extreme poverty definition
ppiScore <- 50
ppiBRA2010[ppiBRA2010$score == ppiScore, "extreme"]
```

ppiCIV2013

Poverty Probability Index (PPI) lookup table for Ivory Coast

Description

Poverty Probability Index (PPI) lookup table for Ivory Coast

Usage

```
ppiCIV2013
```

Format

A data frame with 9 columns and 101 rows:

score PPI score
 n1100 National poverty line (100%)
 n1150 National poverty line (150%)

n1200 National poverty line (200%)

`ppiDOM2010`*Poverty Probability Index (PPI) lookup table for Dominican Republic*

Description

Poverty Probability Index (PPI) lookup table for Dominican Republic

Usage`ppiDOM2010`**Format**

A data frame with 11 columns and 101 rows:

`score` PPI score

`n150` National poverty line (50%)

`n175` National poverty line (75%)

`n1100` National poverty line (100%)

`n1150` National poverty line (150%)

`extreme` USAID extreme poverty

`n1200` National poverty line (200%)

`ppp125` Below \$1.25 per day purchasing power parity (2005)

`ppp250` Below \$2.50 per day purchasing power parity (2005)

`ppp375` Below \$3.75 per day purchasing power parity (2005)

`ppp500` Below \$5.00 per day purchasing power parity (2005)

Source

<https://www.povertyindex.org>

Examples

```
# Access Dominican Republic PPI table
ppiDOM2010

# Given a specific PPI score (from 0 - 100), get the row of poverty
# probabilities from PPI table it corresponds to
ppiScore <- 50
ppiDOM2010[ppiDOM2010$score == ppiScore, ]

# Use subset() function to get the row of poverty probabilities corresponding
# to specific PPI score
ppiScore <- 50
subset(ppiDOM2010, score == ppiScore)
```

```
# Given a specific PPI score (from 0 - 100), get a poverty probability
# based on a specific poverty definition. In this example, the USAID
# extreme poverty definition
ppiScore <- 50
ppiDOM2010[ppiDOM2010$score == ppiScore, "extreme"]
```

ppiDOM2018

Poverty Probability Index (PPI) lookup table for Dominican Republic

Description

Poverty Probability Index (PPI) lookup table for Dominican Republic

Usage

```
ppiDOM2018
```

Format

A data frame with 16 columns and 101 rows:

```
score PPI score
n1100 National poverty line (100%)
n1Food National poverty line (150%)
n1150 National poverty line (200%)
ppp320 Below $3.20 per day purchasing power parity (2011)
ppp550 Below $5.50 per day purchasing power parity (2011)
ppp800 Below $8.00 per day purchasing power parity (2011)
ppp1100 Below $11.00 per day purchasing power parity (2011)
ppp1500 Below $15.00 per day purchasing power parity (2011)
ppp2170 Below $21.70 per day purchasing power parity (2011)
ppp250 Below $2.50 per day purchasing power parity (2005)
ppp500 Below $5.00 per day purchasing power parity (2005)
percentile20 Below 20th percentile poverty line
percentile40 Below 40th percentile poverty line
percentile60 Below 60th percentile poverty line
percentile80 Below 80th percentile poverty line
```

# based on a specific poverty definition. In this example, the national
# poverty line definition
ppiScore <- 50
ppiMEX2017_a[ppiMEX2017_a$score == ppiScore, "n1100"]

```

ppiMLI2010

*Poverty Probability Index (PPI) lookup table for Mali***Description**

Poverty Probability Index (PPI) lookup table for Mali

Usage

```
ppiMLI2010
```

Format

A data frame with 6 columns and 101 rows:

score PPI score

n1100 National poverty line (100%)

n1Food Food poverty line

extreme USAID extreme poverty

ppp125 Below \$1.25 per day purchasing power parity (2005)

ppp250 Below \$2.50 per day purchasing power parity (2005)

Source

<https://www.povertyindex.org>

Examples

```
# Access Mali PPI table
ppiMLI2010

# Given a specific PPI score (from 0 - 100), get the row of poverty
# probabilities from PPI table it corresponds to
ppiScore <- 50
ppiMLI2010[ppiMLI2010$score == ppiScore, ]

# Use subset() function to get the row of poverty probabilities corresponding
# to specific PPI score
ppiScore <- 50
subset(ppiMLI2010, score == ppiScore)

# Given a specific PPI score (from 0 - 100), get a poverty probability
# based on a specific poverty definition. In this example, the national
# poverty line definition
ppiScore <- 50
ppiMLI2010[ppiMLI2010$score == ppiScore, "n1100"]
```

ppiMMR2012

*Poverty Probability Index (PPI) lookup table for Myanmar***Description**

Poverty Probability Index (PPI) lookup table for Myanmar

Usage

```
ppiMMR2012
```

Format

A data frame with 8 columns and 101 rows:

score PPI score

n1Food Food poverty line

n1100 National poverty line (100%)

n1150 National poverty line (150%)

n1200 National poverty line (200%)

extreme USAID extreme poverty

ppp125 Below \$1.25 per day purchasing power parity (2005)

ppiPAK2009

Poverty Probability Index (PPI) lookup table for Pakistan

Description

Poverty Probability Index (PPI) lookup table for Pakistan

Usage

```
ppiPAK2009
```

Format

A data frame with 10 columns and 101 rows:

```
score PPI score
n1100 National poverty line (100%)
n150 National poverty line (50%)
n175 National poverty line (75%)
n1125 National poverty line (125%)
n1200 National poverty line (200%)
extreme USAID extreme poverty
ppp125 Poorest half below 100 national
ppp250 Below $1.25 per day purchasing power parity (2005)
ppp375 Below $2.50 per day purchasing power parity (2005)
```

Source

<https://www.povertyindex.org>

Examples

```
# Access Pakistan PPI table
ppiPAK2009

# Given a specific PPI score (from 0 - 100), get the row of poverty
# probabilities from PPI table it corresponds to
ppiScore <- 50
ppiPAK2009[ppiPAK2009$score == ppiScore, ]
```

```
# Use subset() function to get the row of poverty probabilities corresponding
# to specific PPI score
ppiScore <- 50
subset(ppiPAK2009, score == ppiScore)

# Given a specific PPI score (from 0 - 100), get a poverty probability
# based on a specific poverty definition. In this example, the national
# poverty line definition
ppiScore <- 50
ppiPAK2009[ppiPAK2009$score == ppiScore, "n1100"]
```

ppiPER2012

Poverty Probability Index (PPI) lookup table for Peru

Description

Poverty Probability Index (PPI) lookup table for Peru

Usage

ppiPER2012

Format

A data frame with 9 columns and 101 rows:

`ppiTJK2015`*Poverty Probability Index (PPI) lookup table for Tajikistan*

Description

Poverty Probability Index (PPI) lookup table for Tajikistan

Usage`ppiTJK2015`**Format**

A data frame with 9 columns and 101 rows:

`score` PPI score
`n1Food` Food poverty line
`n1100` National poverty line (100%)
`n1150` National poverty line (150%)
`n1200` National poverty line (200%)
`median` Poorest half below 100% national
`ppp125` Below \$1.25 per day purchasing power parity (2005)
`ppp200` Below \$2.00 per day purchasing power parity (2005)
`ppp250` Below \$2.50 per day purchasing power parity (2005)

Source

<https://www.povertyindex.org>

Examples

```
# Access Tajikistan PPI table
ppiTJK2015

# Given a specific PPI score (from 0 - 100), get the row of poverty
# probabilities from PPI table it corresponds to
ppiScore <- 50
ppiTJK2015[ppiTJK2015$score == ppiScore, ]

# Use subset() function to get the row of poverty probabilities corresponding
# to specific PPI score
ppiScore <- 50
subset(ppiTJK2015, score == ppiScore)

# Given a specific PPI score (from 0 - 100), get a poverty probability
# based on a specific poverty definition. In this example, the national
```

```
# poverty line definition
ppiScore <- 50
ppiTJK2015[ppiTJK2015$score == ppiScore, "n1100"]
```

ppiTLS2013

Poverty Probability Index (PPI) lookup table for Timor Leste

Description

Poverty Probability Index (PPI) lookup table for Timor Leste

Usage

```
ppiTLS2013
```

Format

A data frame with 8 columns and 101 rows:

```
score PPI score
n1100 National lower poverty line (100%)
nu100 National upper poverty line (100%)
nu150 National upper poverty line (150%)
nu200 National upper poverty line (200%)
extreme USAID extreme poverty
ppp125 Below $1.25 per day purchasing power parity (2005)
ppp250 Below $2.50 per day purchasing power parity (2005)
```

Source

<https://www.povertyindex.org>

Examples

```
# Access Timor Leste PPI table
ppiTLS2013

# Given a specific PPI score (from 0 - 100), get the row of poverty
# probabilities from PPI table it corresponds to
ppiScore <- 50
ppiTLS2013[ppiTLS2013$score == ppiScore, ]

# Use subset() function to get the row of poverty probabilities corresponding
# to specific PPI score
ppiScore <- 50
subset(ppiTLS2013, score == ppiScore)
```

```
# Given a specific PPI score (from 0 - 100), get a poverty probability
# based on a specific poverty definition. In this example, the national
# poverty line definition
ppiScore <- 50
ppiTLS2013[ppiTLS2013$score == ppiScore, "n1100"]
```

ppiTZA2016

Poverty Probability Index (PPI) lookup table for Tanzania

Description

Poverty Probability Index (PPI) lookup table for Tanzania

Usage

```
ppiTZA2016
```

Format

A data frame with 19 columns and 101 rows:

score PPI score

n1Food Food poverty line

n1100 National poverty line (100%)

n1150 National poverty line (150%)

n1200 National poverty line (200%)

ppp125 Below \$1.25 per day purchasing power parity (2005)

ppp200 Below \$2.00 per day purchasing power parity (2005)

ppp250 Below \$2.50 per day purchasing power parity (2005)

ppp500 Below \$5.00 per day purchasing power parity (2005)

ppp190 Below \$1.90 per day purchasing power parity (2011)

ppp310 Below \$3.10 per day purchasing power parity (2011)

ppp380 Below \$3.80 per day purchasing power parity (2011)

ppp400 Below \$4.00 per day purchasing power parity (2011)

half100 Poorest half below 100 national

percentile20 Below 20th percentile poverty line

percentile40 Below 40th percentile poverty line

percentile50 Below 50th percentile poverty line

percentile60 Below 60th percentile poverty line

percentile80 Below 80th percentile poverty line

Source

<https://www.povertyindex.org>

Examples

```
# Access Tanzania PPI table
ppiTZA2016

# Given a specific PPI score (from 0 - 100), get the row of poverty
# probabilities from PPI table it corresponds to
ppiScore <- 50
ppiTZA2016[ppiTZA2016$score == ppiScore, ]

# Use subset() function to get the row of poverty probabilities corresponding
# to specific PPI score
ppiScore <- 50
subset(ppiTZA2016, score == ppiScore)

# Given a specific PPI score (from 0 - 100), get a poverty probability
# based on a specific poverty definition. In this example, the national
# poverty line definition
ppiScore <- 50
ppiTZA2016[ppiTZA2016$score == ppiScore, "n1100"]
```

ppiUGA2015

Poverty Probability Index (PPI) lookup table for Uganda

Description

Poverty Probability Index (PPI) lookup table for Uganda

Usage

```
ppiUGA2015
```

Format

A data frame with 13 columns and 101 rows:

score PPI score

n1100 National poverty line (100%)

n1150 National poverty line (150%)

n1200 National poverty line (200%)

half100 Poorest half below 100% national

ppp125 Below \$1.25 per day purchasing power parity (2005)

ppp200 Below \$2.00 per day purchasing power parity (2005)

ppp250 Below \$2.50 per day purchasing power parity (2005)
ppp400 Below \$4.00 per day purchasing power parity (2005)
ppp500 Below \$5.00 per day purchasing power parity (2005)
ppp844 Below \$8.44 per day purchasing power parity (2005)
ppp190 Below \$1.90 per day purchasing power parity (2011)
ppp310 Below \$3.10 per day purchasing power parity (2011)

Source

<https://www.povertyindex.org>

Examples

```
# Access Uganda PPI table
ppiUGA2015

# Given a specific PPI score (from 0 - 100), get the row of poverty
# probabilities from PPI table it corresponds to
ppiScore <- 50
ppiUGA2015[ppiUGA2015$score == ppiScore, ]

# Use subset() function to get the row of poverty probabilities corresponding
# to specific PPI score
ppiScore <- 50
subset(ppiUGA2015, score == ppiScore)

# Given a specific PPI score (from 0 - 100), get a poverty probability
# based on a specific poverty definition. In this example, the national
# poverty line definition
ppiScore <- 50
ppiUGA2015[ppiUGA2015$score == ppiScore, "n1100"]
```

ppiVNM2009

Poverty Probability Index (PPI) lookup table for Vietnam

Description

Poverty Probability Index (PPI) lookup table for Vietnam

Usage

ppiVNM2009

Format

A data frame with 8 columns and 101 rows:

```
score PPI score
n1100 National poverty line (100%)
n1Food Food poverty line
extreme USAID extreme poverty line
ppp125 Below $1.25 per day purchasing power parity (2005)
ppp175 Below $1.75 per day purchasing power parity (2005)
ppp250 Below $2.50 per day purchasing power parity (2005)
molisa MOLISA poverty line
```

Source

<https://www.povertyindex.org>

Examples

```
# Access Vietnam PPI table
ppiVNM2009

# Given a specific PPI score (from 0 - 100), get the row of poverty
# probabilities from PPI table it corresponds to
ppiScore <- 50
ppiVNM2009[ppiVNM2009$score == ppiScore, ]

# Use subset() function to get the row of poverty probabilities corresponding
# to specific PPI score
ppiScore <- 50
subset(ppiVNM2009, score == ppiScore)

# Given a specific PPI score (from 0 - 100), get a poverty probability
# based on a specific poverty definition. In this example, the national
# poverty line definition
ppiScore <- 50
ppiVNM2009[ppiVNM2009$score == ppiScore, "n1100"]
```

ppiYEM2009

Poverty Probability Index (PPI) lookup table for Yemen

Description

Poverty Probability Index (PPI) lookup table for Yemen

Usage

ppiYEM2009

Format

A data frame with 8 columns and 101 rows:

score PPI score

n1100 National poverty line (100%)

n1Food Food poverty line

extreme USAID extreme poverty

ppp125 Below \$1.25 per day purchasing power parity (2005)

ppp250 Below \$2.50 per day purchasing power parity (2005)

ppp300 Below \$3.00 per day purchasing power parity (2005)

ppp400 Below \$4.00 per day purchasing power parity (2005)

Source

<https://www.povertyindex.org>

Examples

```
# Access Yemen PPI table
ppiYEM2009

# Given a specific PPI score (from 0 - 100), get the row of poverty
# probabilities from PPI table it corresponds to
ppiScore <- 50
ppiYEM2009[ppiYEM2009$score == ppiScore, ]

# Use subset() function to get the row of poverty probabilities corresponding
# to specific PPI score
ppiScore <- 50
subset(ppiYEM2009, score == ppiScore)

# Given a specific PPI score (from 0 - 100), get a poverty probability
# based on a specific poverty definition. In this example, the national
# poverty line definition
ppiScore <- 50
ppiYEM2009[ppiYEM2009$score == ppiScore, "n1100"]
```

ppiZAF2009

*Poverty Probability Index (PPI) lookup table for South Africa***Description**

Poverty Probability Index (PPI) lookup table for South Africa

Usage

ppiZAF2009

Format

A data frame with 8 columns and 101 rows:

score PPI score

n1100 National poverty line (100%)

n1Food Food poverty line

extreme USAID extreme poverty

nu100 National upper poverty line (100%)

ppp125 Below \$1.25 per day purchasing power parity (2005)
